

RadaScan® Series 3 Responder Release

November 2015

Dear Customer,

We're pleased to announce that as of 1st October 2015, Guidance Marine has officially launched the RadaScan® Series 3 Responder. The introduction of the series 3 responder marks the discontinuation of series 2 responders.

At Guidance Marine we take pride in leading the market and continuing to invest in our products to exceed the needs of our customers'. We have listened to our customers' and we believe these additional features that the series 3 responder brings will be beneficial to the end user.

New features of the Series 3 Responder includes:

- Flat fronted design that increases RF performance
- Military grade connector 62GB
- A new toughened switch with integrated LED and dust cap
- An improved LED that indicates the charge of the battery for rechargeable responders
- A larger recess at the back to improve access to the connector
- Weight has been reduced from 4KG to 3KG
- New design with no metal exposure; the series 3 responder now covers ATEX zones 0,1 and 2 where as its predecessor only covered zones 1 and 2
- Lanyard included in responder kit

The series 3 responder is compatible with the same mounting bracket installation as the series 2, allowing efficient upgrades for existing customers. Despite the increase in specification – cost will remain the same and updated part numbers can be found below. Guidance Marine will continue to service and repair series 2 responders as long as replacement parts are available or until the end of service date. All extended service agreements currently in effect will continued to be honoured. The series 3 responder will be the standard Responder.

To discuss your current responder installations or for further information on the new series 3 responder, including any requests to upgrade, please contact us directly.

For more information on the Series 3 Responders, please refer to the [RadaScan Responder Buying Guide](#).

Online Store

Guidance Marine Direct – www.marine.direct facilitates the sale of peripheral items such as targets, responders, sensor spares and accessories.
